

Java Script Interactivity:

- **Dynamically Loading Footer/header:** By using a script from a previous assignment, I can dynamically load headers and footers across the website. This approach allows for website-wide changes to be made easily and ensures consistency by sourcing headers and footers from a single HTML file, eliminating discrepancies.
- **Working Email Form:** I have implemented a working email submission form on the About page. This form enables users to contact my client directly for inquiries or job opportunities. By integrating this feature into the website, I've enhanced direct communication with users.
- **Photo Gallery on a Grid:** The photo gallery on the About page displays multiple photos of my client in a grid format. Users can click on a photo to view a larger version, accompanied by a fun message at the bottom. This feature provides a more engaging and interactive way for users to connect with my client.

CRAP principles:

- **Contrast:** The website employs contrast by combining a dark background with light purple and other lighter colors for text and icons. This design creates a visually appealing dark theme while ensuring that titles and important text stand out.
- **Repetition:** I use a consistent style across the entire website, highlighting important text with lighter colors and larger font sizes. This consistent theming and styling help users quickly identify the key information on each page.
- **Alignment:** The content is centered on each page, ensuring that important information is easily accessible and visually organized. Spacing between sections ensures that even pages with less content do not feel empty.

- **Proximity:** Cards in various sections are grouped closely together to indicate related content while maintaining enough spacing to ensure readability and clarity.

Feedback

Most of the feedback I received focused on two main areas: the alignment of information on my pages and the contrast of my color scheme. To address these issues, I ensured that most of my pages were properly aligned to the center. This adjustment resolved problems where sections with cards and headings were off-center, especially when viewed on lower zoom levels, which previously caused empty space in the middle of the page. By centering these elements, the layout now feels more balanced and visually appealing.

Regarding the color scheme, some critiques mentioned that the colors didn't resonate well, but since the theme was aligned with my client's preferences and did not create usability issues, I retained it. However, I enhanced the contrast by lightening specific text to make it stand out more while still maintaining the overall theme.

Another point of feedback highlighted the size of certain images. To resolve this, I resized and formatted the images to be smaller and proportional, improving their visual appeal without overwhelming the page layout.

Finally, I received comments about the seafoam green used on buttons and messages. While some found it unconventional, I decided to keep it because it aligns with the website's theme and adds emphasis to small notes and messages. These elements are intentionally designed to draw attention to updates or future content, which matches their purpose.

Clients Needs

A paragraph on how well you think your website will meet the needs of your stakeholders/clients, and your future plans with the website.

I believe this website does an excellent job of meeting my client's needs by offering a flexible, well-organized platform that provides clear and detailed information. It includes multiple pages that highlight the client's skills, certifications, and achievements in a way that is both professional and easy to navigate. The interactive features, powered by dynamic JavaScript, make the website engaging and help it stand out from other similar portfolios. These elements showcase the client's abilities and increase their appeal to potential employers by emphasizing their qualifications in a visually interesting and unique manner.

Looking ahead, the website is designed to grow alongside my client's career. It can be easily updated to include new certifications, work experience, or projects as they become relevant. This adaptability ensures the website stays current and continues to serve as a reliable hub of information. Additional features, like sections for testimonials or detailed case studies, could also be added in the future to provide even more value.

Overall, this website is not just a portfolio but a dynamic and expandable tool that reflects my client's skills and professionalism. By keeping the design user-friendly and the content adaptable, it will remain a useful resource for showcasing their talents and connecting with potential employers or collaborators.
